WF-NGEEK

Intelligent Inventory Management
and Procurement Process Automation

Problem Statement

Think, inventory management and procurement could be more efficient through minimal human intervention?

What is the need of the hour?

Vendor interactions, procurement process and inventory management is highly taxing on the system when it comes to resource usage and time consumed.

An intelligence to monitor and manage the usage of office inventory, detect discrepancies, analyse trends and predict future usage can be a game changer.

Why WF-InGeek?

WF-InGeek is a SaaS that can make your inventory management and procurement process effortless and efficient.

WF-InGeek seamlessly integrates with your system. WF-InGeek creates a compelling unified platform giving you the competitive advantage you need for this decade in time.

or over stocking

REPLENISH automatically
without any hassle

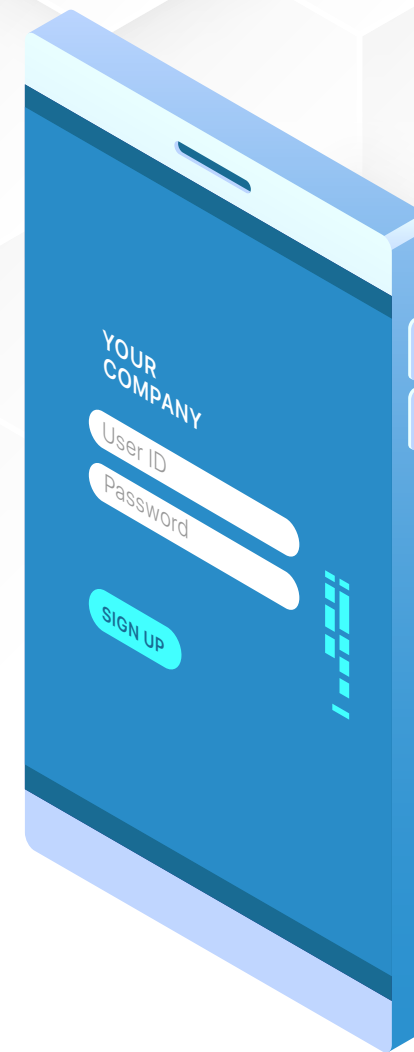

How WF-InGeek works

Onboarding Process

WF-InGeek is set up for your organization in a one time onboarding process

How WF-InGeek works

Create
Company
Profile

Onboarding Process

How WF-InGeek works

Upload Inventory List

Monthly Consumable list of product and the product details are uploaded to the WF-InGeek portal, which are editable given the changes later.

- ◆ **Product ID**
- ◆ **Product Title**
- ◆ **Brand**
- ◆ **Reference Price**
- ◆ **GST**

Onboarding Process

How WF-InGeek works

Upload your previous
Purchase List

Upload consumption
history of a min of 2 years

Consumption history will form our initial data set to build analytics and forecasts for you.

Onboarding Process

How WF-InGeek works

- ◆ Admin manager for your organization/branch is registered
- ◆ Admin manager will have the rights and privileges of approval of all management and procurement processes

- ◆ Users are created.
- ◆ Users can request for product

WF-InGeek SaaS is ready for your organization.

User Request: Products

How WF-InGeek works

User represent either department or business groups.

Users can request for products

WF-InGeek reconfirms the request, sends an approval notification to the admin manger

User receives an OTP on admin approval

User receives the products in exchange for OTP

User Request: Products

How WF-InGeek works

On validation of OTP, The request event gets mapped as a check-out and is tagged to the respective user

The department/user's consumption list is updated

The process repeats for every user requests throughout the month

Inventory Requests

How WF-InGeek works

Approved user will select the products from a suggested list and reconfirms the request

WF-InGeek automated model updates the purchase list with the new items.

Inventory Requests

How WF-InGeek works

WF-InGeek intelligent model generates the purchase order

Admin manager is updated through mail. He can view, edit, approve/disapprove the PO through a stage check

On approval an **automated PO** send out to vendors

Procurement Process: Request for Quotation

How WF-InGeek works

Vendor/Vendors can see the purchase order on mail and WF-InGeek portal by their respective approved inventory list

Vendor ships the products and updates the PO status on WF-InGeek portal

Procurement Process: Request for Quotation

How WF-InGeek works

In an alternate scenario, the manager can Request For Quotation(RFQ) from multiple vendors

Vendors on acknowledgement come on portal and fill in RFQs with their respective rates

Procurement Process: Comparative Statements and Recommendations

How WF-InGeek works

- WF-InGeek provides automated comparative statement to assist the procurement team on the decision making process.
- Recommendations by WF-Ingeek based on price and vendor performance index.

Procurement Process: Monthly/Threshold base

WF-Ingeek initiates replenishment monthly or on reaching a predefined threshold. If threshold reaches earlier than expected, WF-InGeek will:

- ◆ **Analyse and identify the reasons and users responsible.**
- ◆ **Calculate and predict the quantity of items required for the remaining of the month.**
- ◆ **Automatic PO generated for the number of days remaining and for the upcoming month**

ML based Analytics & Predictions

- WF-InGeek observes the consumption patterns and product associations making actionable predictions for seasonality and trends of usage.
- The continuously evolving AI can learn from the usage patterns in your company and give accurate feedback to correct inefficiencies in the system.

How WF-InGeek works

A fully automated and realtime monitoring WF-InGeek is your knight against any mishaps in inventory management and procurement process at your organization.
